Van de Geer, 2017[1]	Quasi-experimenteel	Ziekenhuis, Nederland	Vijfentachtig palliatieve patiënten (leeftijd 66–72 jaar) opgenomen op afdelingen van zes deelnemende ziekenhuizen.	Scholing in spirituele zorg, gegeven door getrainde geestelijk verzorgers aan multidisciplinaire ziekenhuisteams.	Geen scholing in spirituele zorg, gegeven door getrainde geestelijk verzorgers aan multidisciplinaire ziekenhuisteams.	Patiënten rapporteerden dat aandacht voor spirituele behoeften zeer belangrijk was. De ervaren aandacht voor spirituele/existentiële behoeften (0–10) steeg in de interventiegroep naar 7,9 (SD 1,8) versus 5,9 (SD 3,2) in de baseline/controlegroepen (p=0,008; SAIL).
