

Bijlage Zoekverantwoording

Onderzoeksvraag & onderzoekscharacteristieken Droege mond

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op droge mond bij patiënten in de palliatieve fase?

Patiënten/Patiënten	Patiënten in de palliatieve fase met droge mond
Intervention/Interventie	Niet-medicamenteus: Voeding, mondverzorging, kauwgom, mondspoelingen met water of fysiologisch zout, ijs (ijsblokjes, gecrushed ijs, bevroren ananas), gustatoir (geur/ruiken), speelselsubstituten, TENS, acupunctuur, stoppen/wijzigen van medicatie met xerogene werking Medicamenteus: pilocarpine
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Droge mond Belangrijk: Bijwerkingen

Risk of bias tabellen

Author, publication year: Hammond 2023		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	No	
3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	
4. Did the review authors use a comprehensive literature search strategy?	Partial yes	Did not look at references or grey literature
5. Did the review authors perform study selection in duplicate?	Yes	
6. Did the review authors perform data extraction in duplicate?	Yes	
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	
8. Did the review authors describe the included studies in adequate detail?	Yes	
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	

11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	N.A.	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	N.A.	
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	Yes	
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	N.A.	
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	N.A.	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	No

Onderzoeksvraag & onderzoekscharacteristieken Infecties en ontstekingen in de mond

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op infecties en ontstekingen in de mond (stomatitis, orale mucositis, candidiasis) bij patiënten in de palliatieve fase?

Patients/Patiënten	Patiënten in de palliatieve fase met een schimmelinfectie, virale infectie of bacteriële infectie van de mond
Intervention/Interventie	Medicamenteus: Corticosteroïden, tetracycline, zilvernitraat, lidocaïne, miconazol, fluconazol, itraconazol, chloorhexidine gel/spoeling, hextriol, aciclovir/valacyclovir, metronidazol, clindamycine Niet-medicamenteus: Caphosol, low level lasertherapie, mondverzorging
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Infecties in de mond Belangrijk: Bijwerkingen

Bijlage Onderzoekskenmerken

Niet van toepassing.

Onderzoeksvraag & onderzoekskenmerken Pijn in de mond

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op pijn in de mond bij patiënten in de palliatieve fase?

Patients/Patiënten	Patiënten in de palliatieve fase met pijn in de mond
Intervention/Interventie	Niet-medicamenteus: Mondverzorging, (aanpassing van de) voeding, caphosol, coating agents Medicamenteus: Paracetamol, opioiden (systemisch), xylocaine viskeus (lokaal), morfine mondspoeling (lokaal)
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Pijn in de mond Belangrijk: Bijwerkingen

Tabel 3. Studiekarakteristieken

Author, publication year: Monsen, 2021						
Study characteristics	Patient characteristics	Intervention (I)	Comparison / control (C)	Follow-up	Outcome measures and effect size	Comments
Type of study: RCT	<u>Inclusion criteria:</u> - Admission to hospice - Age 18 years or older	Salvia Officinalis (SO) rinse, consisting of 2.5g SO herbal tea/100 ml	Normal saline (NS) rinse. Rinsing twice for 30 seconds with 10-15ml for	<u>Length of follow-up:</u> 5 days <u>Loss-to-follow-up:</u>	EORTC QLQ-OH17 item #35 mouth soreness: There was no	Other outcomes such as dry mouth not reported in this table.
Setting: Hospice						

<p>Country: Norway</p> <p>Source of funding: Lovisenberg Diaconal Hospital, Bundi Cancer Support Foundation, Kirsten Ronnings Endowment, and South-Eastern Norway Regional Health Authority</p>	<p>- Diagnosis of advanced cancer - Reported current oral discomfort</p> <p><u>Exclusion criteria:</u> - Estimated life expectancy of 2 weeks or less - Using antifungal medication - Currently receiving head or neck radiation therapy - Epileptic - Diabetes - Condition interfering with study participation</p> <p><u>N total at baseline:</u> Intervention: 44 Control: 44</p> <p><u>Important prognostic factors:</u> Age, mean (SD): I: 64.3 (9.4) C: 63.5 (11.8)</p> <p>Sex: I: 34% M C: 20% M</p> <p>The use of opiate medication was more frequent in the intervention group (93%) than the control group (77%, p=0.049).</p>	<p>water. Rinsing twice for 30 seconds with 10-15ml for four times a day. Four days in total.</p>	<p>four times a day. Four days in total.</p>	<p>Intervention :</p>	<p>N=11 (25%) Reasons (decline in health status, no longer wanting to participate)</p> <p>Control: N=4 (9%) Reasons (decline in health status, no longer wanting to participate, wanted SO intervention)</p>	<p>significant improvement in mouth soreness in both groups after 5 days of use.</p>
---	--	---	--	-----------------------	---	--

Author, publication year: Kvalheim, 2019

Study characteristics	Patient characteristics	Intervention (I)	Comparison / control (C)	Follow-up	Outcome measures and effect size	Comments
Type of study: RCT, cross-over	<p><u>Inclusion criteria:</u> - Xerostomia - Institutionalized palliative care</p>	17% watery solution of glycerol, one application	1. Oxygenated glycerol triester (Aequasyal),	<p><u>Length of follow-up:</u> Two hours</p>	<p><i>Discomfort/pain immediately after:</i> Aequasyal: OR 3.35 (95%CI 1.85;6.06)</p>	

Setting: Palliative care units	- Curative treatment of existing diseases completed or terminated - WHO performance status III or over - Cognitively functioning - Capable of giving responses to a limited questionnaire - Expected to stay at the care center for a minimum of 3 days		one application 2. Salient, one application	<u>Loss-to-follow-up:</u> None	Glycerol: OR 8.39 (95%CI 4.12;17.08) Salient: OR 4.70 (95%CI 2.63;8.39) Difference between glycerol and other interventions significant ($p<0.01$)	
Country: Norway	<u>Exclusion criteria:</u> - Treated with chemotherapy or radiotherapy for head or neck cancer				<i>Discomfort/pain 2 hours later:</i> Aequasyal: OR 5.69 (95%CI 3.20;10.12) Glycerol: OR 1.85 (95%CI 1.00;3.45) Salient: OR 5.61 (95%CI 3.15;10.02) Difference between glycerol and other two interventions significant ($p<0.05$)	
Source of funding: None	<u>N total at baseline:</u> N=30				The majority of patients (19/30) preferred glycerol ($p<0.001$).	
	<u>Important prognostic factors:</u> Age, mean: 68 years Sex: 43% M					

Tabel 4. Risico op bias

Author, publication year	Random sequence generation (selection bias)	Allocation concealment (selection bias)	Blinding of patient and personnel (performance bias)	Blinding of outcome assessor (detection bias)	Follow-up and ITT or per protocol analysis (attrition bias)	Selective reporting	Other bias
Monsen, 2021	Low risk <i>Web-based randomization</i>	Unclear <i>Use of envelops, details missing</i>	High risk <i>Not possible to blind for taste</i>	Low risk <i>Blinded</i>	Low risk <i>Drop-out difference not significant</i>	Low risk <i>Matches registration</i>	N.A.
Kvalheim, 2019	High risk <i>Randomization generated by project leader</i>	Low risk <i>Cross-over trial</i>	High risk <i>Patients blinded but not personnel</i>	Unclear <i>Blinding not reported</i>	Low risk <i>Complete data</i>	Unclear <i>No registration available</i>	N.A.

Tabel 5. GRADE beoordeling

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Salvia Officinalis	Normal Saline	Relative (95%CI)	Absolute	
EORTC CHC-OH17 item mouth soreness											
1	RCT	Serious ¹	Not serious	Not serious	Serious ²	None	33	39		After 5 days the scores were 1.26 vs 1.27 (p=0.92). Day by group interaction not significant (p=0.46).	LOW

¹ Use of envelopes for randomization, patients and providers not blinded for treatment

² Confidence interval not reported

Quality assessment							No of patients			Effect		Quality

1	RCT	Serious ¹	Not serious	Not serious	Very serious ²	None	30	30	30	Immediately after: Aequasyal: OR 3.35, glycerol: OR 8.39, Salient: OR 4.70 2 hours later: Aequasyal: OR 5.69, Glycerol: OR 1.85, Salient: OR 5.61		VERY LOW

¹ Unclear randomization, lack of blinding

² Large confidence intervals for before-after comparison, no confidence interval given for comparisons between interventions

Onderzoeksvraag & onderzoekskenmerken Slikstoornissen

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op slikstoornissen bij patiënten in de palliatieve fase?

Patiënten/Patiënten	Patiënten in de palliatieve fase met slikstoornissen
Intervention/Interventie	Niet medicamenteus: Logopedie, myotomie, voeding, neuromusculaire stimulatie, elektrische stimulatie, acupunctuur Medicamenteus: Botulinotoxine injectie, baclofen, rotigotine, apomorfine, cholinesteraseremmers, immunosuppresiva
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Slikstoornissen Belangrijk: Bijwerkingen

Risk of bias tabellen

Author, publication year: Cheng 2022		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	Yes	
3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	No explanation was given why they only included RCTs.
4. Did the review authors use a comprehensive literature search strategy?	Yes	
5. Did the review authors perform study selection in duplicate?	Yes	
6. Did the review authors perform data extraction in duplicate?	Yes	
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.
8. Did the review authors describe the included studies in adequate detail?	Partial yes	Description of included studies lacked some detail pertaining to studies' design and setting.
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	No information on the funding source of individual included studies is provided, nor did authors indicate to have searched for this information.

11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	Yes	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	Partial yes	They performed a sensitivity analyses excluding the study with high risk of bias, but not with moderate risk of bias.
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	Partial yes	The discussion section outlines the high RoB of most studies, but not necessarily on an individual basis.
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	Partial yes	A hypothesis for the found heterogeneity is stated in the discussion.
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	Yes	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	Yes	A potential conflict of interest of one of the authors was indeed stated. No funding sources were given (i.e., authors state that project did not receive any funding from any kind of sector).

Author, publication year: Wu 2023		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	Yes	

3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	No explanation was given why they only included RCTs.
4. Did the review authors use a comprehensive literature search strategy?	Yes	
5. Did the review authors perform study selection in duplicate?	Yes	.
6. Did the review authors perform data extraction in duplicate?	Yes	
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.
8. Did the review authors describe the included studies in adequate detail?	Partial yes	Description of included studies lacked some detail pertaining to studies' design and setting.
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	No information on the funding source of individual included studies is provided, nor did authors indicate to have searched for this information.
11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	Yes	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	No	Authors did not investigate impact of variable RoB rates on analysis results.
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	No	RoB is not mentioned during the discussion of the results.
14. Did the review authors provide a satisfactory explanation for, and	Yes	

discussion of, any heterogeneity observed in the results of the review?		
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	No	Publication bias tests were not conducted due to low number of studies in review (10).
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	Yes	Authors indicated the absence of any commercial or financial relationships that would count as a conflict of interest.

Author, publication year: Kesik 2021		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	No	No mention is made of registering the protocol.
3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	No explanation given for including the study designs of their choosing.
4. Did the review authors use a comprehensive literature search strategy?	Partial yes	Did not look at references or grey literature, and search date missing.
5. Did the review authors perform study selection in duplicate?	No	Not mentioned.
6. Did the review authors perform data extraction in duplicate?	No	Not mentioned.
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.

8. Did the review authors describe the included studies in adequate detail?	No	Too little detail provided per study.
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	No	No risk of bias was assessed.
10. Did the review authors report on the sources of funding for the studies included in the review?	No	No information on the funding source of individual included studies is provided, nor did authors indicate to have searched for this information.
11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	N.A.	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	N.A.	
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	No	No RoB analysis was conducted (see 9).
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	No	Heterogeneity was not assessed.
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	N.A.	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	No	Authors did not include any kind of Conflict of Interest statement in their publication.

Author, publication year: Wen 2022		
Item	Yes, partial yes or no	Explanation

1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	No	No protocol registration mentioned
3. Did the review authors explain their selection of the study designs for inclusion in the review?	Partial yes	In the introduction they indicate previous SRs failed to provide sufficient evidence due to lack of controlled studies.
4. Did the review authors use a comprehensive literature search strategy?	Partial yes	Although enough databases were searched, the search string was limited.
5. Did the review authors perform study selection in duplicate?	Yes	
6. Did the review authors perform data extraction in duplicate?	Yes	
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.
8. Did the review authors describe the included studies in adequate detail?	Yes	
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	Individual studies' funding sources were not extracted.
11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	N.A.	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	N.A.	

13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	No	Authors did not discuss the explicit impact of some of the lower-quality studies on the results of the review.
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	No	Heterogeneity in studies was not assessed nor addressed.
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	N.A.	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	Yes	Authors disclosed a lack of financial (or otherwise) conflicting interests.

Author, publication year: Essat 2019		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	Yes	
3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	Authors did not give an explanation for their selection of RCTs and within-subject studies.
4. Did the review authors use a comprehensive literature search strategy?	Yes	
5. Did the review authors perform study selection in duplicate?	Partial yes	Title-selection done by one author, subsequent title + abstract selection done by two independent reviewers.
6. Did the review authors perform data extraction in duplicate?	No	One author performed data extraction, which was checked by another author.

7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.
8. Did the review authors describe the included studies in adequate detail?	Partial yes	Details on and outcome data missing.
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	Reasons for exclusion of unspecified studies was given, but no list of which studies were specifically excluded and for what reason.
11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	N.A.	
12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	N.A.	
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	No	Authors discussed the low sample sizes of some studies, but did not discuss RoB-related issues in relation to the conclusions.
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	No	Heterogeneity of individual studies not discussed.
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	N.A.	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	Yes	Yes, authors included a conflict of interest statement, including information on funding sources.

¹ Deviation from intended intervention, outcome measurement issues

² Small sample size, large confidence interval

Motor NMES + Traditional Swallowing Therapy (TST) vs. sensory NMES + TST vs. only TST

Quality assessment							No of patients		Effect		Quality	
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	mNMES+TST	sNMES+TST	TST only	Relative (95%CI)	Absolute	
<i>Dysphagia severity scores, Swallowing quality of life scores, MDADI [Wen 2022]</i>												
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	28	27	30	—	No statistics sizes reported, authors report that all groups displayed significant improvement on dysphagia severity scores after treatment; additionally, only minor and non-significant difference between groups.	VERY LOW

¹ Randomization not sufficient, no allocation concealment

² Lack of detailed outcome data

Pharyngeal electrical stimulation (PES) vs. Sham PES

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Stimulation	Sham stimulation	Relative (95%CI)	Absolute	
<i>Penetration-aspiration scale [Cheng 2022, Kesik 2021]</i>											

2	RCT	Very serious ¹	Not serious	Not serious	Very serious ²	None	13	13	—	Study 1: SMD = 0.75 [95%CI -1.01;2.50]. Study 2: a significant effect of the intervention on PAS scores (d = 3.18 (I), d = 2.26 (C)) ($p < .0001$).	VERY LOW
---	-----	---------------------------	-------------	-------------	---------------------------	------	----	----	---	--	----------

¹ Cross-over design with risk of carry-over effects, deviation from intended intervention

² Large confidence interval, small sample sizes

Acupuncture + CDT vs. CDT only

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Acupuncture + CDT	CDT Only	Relative (95%CI)	Absolute	
<i>Swallowing reaction time [Wu 2023]</i>											
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	28	28	—	SMD = 0.82 [95%CI 0.27;1.37]	VERY LOW

¹ Randomization issues, lack of blinding, outcome measurement issues

² Small sample size

Acupuncture + functional training (FT) vs. Functional training only

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Acupuncture + FT	FT Only	Relative (95%CI)	Absolute	
<i>Video-fluoroscopic swallowing study score [Wu 2023]</i>											
3	RCT	Very serious ¹	Not serious	Not serious	Not serious	None	148	148	—	SMD = 1.48 [95%CI 1.16, 1.81]	LOW
<i>Standardized swallowing assessment score [Wu 2023]</i>											
3	RCT	Very serious ²	Not serious	Not serious	Not serious	None	112	114	—	SMD = -3.08 [95%CI -4.01;-2.15]	LOW
<i>Water swallow test swallowing efficiency rate [Wu 2023]</i>											
6	RCT	Very serious ³	Not serious	Not serious	Not serious	None	192	190	RR: 1.40 [95%CI: 1.25;1.58, $p < 0.001$]	—	LOW

¹ Issues with allocation concealment, issues with blinding of participants and outcome assessment

² Issues with allocation concealment and blinding of outcome assessment

³ Potential selection bias, issues with allocation concealment, issues with outcome assessment blinding

Expiratory Muscle Strength Training (EMST) vs. Sham EMST

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	EMST	Sham EMST	Relative (95%CI)	Absolute	Quality
<i>Fibre-optic endoscopic evaluation of swallowing Score [Cheng 2022]</i>											
1	RCT	Not serious	Not serious	Not serious	Very serious ¹	None	24	21	—	SMD = 1.08 [95%CI 0.45;1.71]	LOW
<i>Penetration-aspiration scale [Cheng 2022]</i>											
1	RCT	Serious ²	Not serious	Not serious	Very serious ¹	None	30	30	—	SMD = -0.08 [95%CI -0.59;-0.42]	VERY LOW

¹ Small sample size, large confidence interval

² Unclear randomization process

Expiratory Muscle Strength Training (EMST) at increasing resistance vs. EMST at fixed resistance

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	EMST	EMST Fixed resistance	Relative (95%CI)	Absolute	Quality
<i>Water swallowing test, SWAL-QOL [Essat 2019]</i>											
1	RCT	Serious ¹	Not serious	Not serious	Very serious ²	None	9	9	—	For both water-swallowing function and SWAL-QOL no significant differences were found between intervention and control group.	VERY LOW

¹ Unclear blinding of participants or personnel, unclear blinding of outcome assessment

² Small sample size, pilot trial

Postural training (PT) + Expiratory Muscle Strength Training (EMST) vs. EMST only

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	ESM+PT	Only EMST	Relative (95%CI)	Absolute	Quality
<i>Video-fluoroscopic swallowing score [Wen 2022]</i>											
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	18	15	—	VFS scores went down from 35.1 to 22.5 in the EMST group vs from 33.5 to 16.2 in the EMST+PT group (p<0.05).	VERY LOW

¹ Unclear risk with allocation concealment, issues with blinding of participants or personnel

² Small sample size

Postural training (PT) + feeding instructions vs. Feeding instructions only vs. No treatment

Quality assessment							No of patients			Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	PT + feeding instr.	Feeding instr. only	No treatment	Relative (95%CI)	Absolute	
<i>Clinical evaluation of swallowing, FEES, SWAL-QOL [Essat 2019]</i>												
1	Non-randomized CT	Very serious ¹	Not serious	Not serious	Serious ²	None	10	6	8	—	No effect sizes provided in SR. Significant improvements in clinically evaluated symptoms of dysphagia when swallowing solid and liquid consistencies ($p<.001$ and $p=.022$ respectively) compared to the other two groups. PT + feeding instr. Group also scored better on items of the SWAL-QOL compared to both other groups ($p=.029$, $p=.004$). No PT effect found in FEES measurements.	VERY LOW

¹ No allocation randomization and no concealment, high risk of selection bias

² Small sample size

Video-Assistant Swallowing (VAS) therapy vs. Conventional dysphagia therapy (CDT)

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	VAST	CDT	Relative (95%CI)	Absolute	
<i>Fibre-optic endoscopic evaluation of wallowing Score [Cheng 2022]</i>											
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	21	21	—	SMD = 1.13 [95%CI 0.47;1.78]	VERY LOW

¹ Unclear randomization process, selection of reported outcomes

² Small sample size

Lung volume recruitment (LVR) vs. No treatment

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	LVR	No treatment	Relative (95%CI)	Absolute	
<i>Peak cough flow measure [Essat 2019]</i>											
1	RCT	Not evaluated by SR ¹	Not serious	Not serious	Serious ²	Very little information given ¹	29	29	—	No effect size given. Authors report significant positive effect on peak cough flow (PCF) during unassisted coughing, hawking, throat clearing, and forced expiration.	VERY LOW

¹ Essat et al. SR was unable to perform RoB assessment as this was a conference paper, cross-over design with risk of carry-over

² Small sample size

Traditional Swallowing Therapy (TST) + sensory SES vs. TST + motor SES vs. only TST

Quality assessment							No of patients		Effect		Quality	
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	TST+sSES	TST+mSES	TST only	Relative (95%CI)	Absolute	
<i>Video-fluoroscopic swallowing score & fibre-optic endoscopic evaluation of swallowing [Wen 2022]</i>												
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	30	30	30	—	No statistics reported, authors found no statistical differences between groups, and conclude that surface electrical stimulation is not effective.	VERY LOW

¹ Issues with randomization process, selection bias, issues with blinding of participants or personnel

² Small sample size

Traditional dysphagia therapy (TDT) vs. No TDT (routine care)

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	CDT	No CDT, routine care	Relative (95%CI)	Absolute	

Mann assessment of swallowing ability (MASA) score [Kesik 2021]											
No.	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	No of patients	Effect	Quality		
1	RCT	Not evaluated by SR ¹	Not serious	Not serious	Serious ¹	None	10	10	Main effect of the Time x Group interaction was significant ($P < 0.001$). A large effect sizes were found for MASA score in both the TDT ($d = 3.91$) and the routine care ($d = 1.11$) groups.	VERY LOW	

¹ Kesik et al.'s SR does not feature a risk of bias assessment

² Small sample size

Speech and language training (SLT) vs. botulinum injection vs. no treatment

Quality assessment							No of patients			Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	SLT	Botulinum	No treatment	Relative (95%CI)	Absolute	
<i>Drooling rating scale (Marks et al.)</i>												
1	RCT	Very serious ¹	Not serious	Serious ²	Very serious ³	None	6	Unknown	unknown	—	No statistics reported, but authors report that the severity of salivation was significantly reduced in both comparison groups compared to the blank control group.	VERY LOW

¹ Unclear random sequence generation, unclear allocation concealment, issues with participant or personnel blinding, incomplete outcome data through attrition

² Drooling used as outcome, indirect measure of swallowing performance

³ Small sample size, lack of information on subgroup sample sizes

Thin liquid + Chin-down posture (CDP) vs. Nectar-thickened (NT) liquid (no CDP) vs. Honey-thickened (HT) liquid (no CDP)

Quality assessment							No of patients			Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Thin liquid + CDP	NT liquid (no CDP)	HT liquid (no CDP)	Relative (95%CI)	Absolute	
<i>Aspiration rates [Essat 2019]</i>												
2	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	487	461	351	—	Study 1: Honey-thickened liquids resulted in lowest proportion of patients who aspirated (44%)	VERY LOW

											compared with nectar-thickened liquids (54%, p < .001) and the use of the chin-down posture (59%, p < .0001) Study 2: No significant differences in aspiration rates found between conditions.	
--	--	--	--	--	--	--	--	--	--	--	---	--

¹ Unclear allocation randomization and concealment, unclear blinding of outcome assessment, risk of carry-over effect due to sequential design, unclear blinding of outcome assessment.

² Non-congruent effects

Swallowing management clinic (SMC) vs. Routine care

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	SMC	Routine care	Relative (95%CI)	Absolute	
<i>Dysphagia rehabilitation efficiency score; mis-inhalation incidence rate [Essat 2019]</i>											
1	Non-randomized CT	Very serious ¹	Not serious	Not serious	Serious ²		117	100	—	Increased dysphagia recovery in the intervention group (68.3%) compared with the control group (17%) (p < .01). Mis-inhalation rate also observed to be lower in the intervention group than in the control group (p < .01)	VERY LOW

¹ No random allocation, no allocation concealment, unclear blinding of personnel or participants, and unclear blinding of outcome assessment

² No confidence intervals reported

Onderzoeksvraag & onderzoekskenmerken Smakstoornissen

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op smakstoornissen bij patiënten in de palliatieve fase?

Patients/Patiënten	Patiënten in de palliatieve fase met smakstoornissen
Intervention/Interventie	Niet-medicamenteus: Voeding, mondverzorging, kauwgom, staken van roken, logopedie voor reukrevalidatie, consult met een diëtist, tandarts, mondhygiëniste, KNO-arts of neuroloog Medicamenteus: Zinksulfaatdrank, clonazepam
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Smaakstoornissen Belangrijk: Bijwerkingen

Tabel 4. Risico op bias

Author, publication year: Braud 2020		
Item	Yes, partial yes or no	Explanation
1. Did the research questions and inclusion criteria for the review include the components of PICO?	Yes	
2. Did the report of the review contain an explicit statement that the review methods were established prior to the conduct of the review and did the report justify any significant deviations from the protocol?	Yes	
3. Did the review authors explain their selection of the study designs for inclusion in the review?	No	They don't justify their study design selection
4. Did the review authors use a comprehensive literature search strategy?	Yes	
5. Did the review authors perform study selection in duplicate?	Yes	
6. Did the review authors perform data extraction in duplicate?	Yes	
7. Did the review authors provide a list of excluded studies and justify the exclusions?	No	
8. Did the review authors describe the included studies in adequate detail?	Partial yes	Most data available but exact outcome data and loss to follow-up not reported
9. Did the review authors use a satisfactory technique for assessing the risk of bias (RoB) in individual studies that were included in the review?	Yes	
10. Did the review authors report on the sources of funding for the studies included in the review?	No	
11. If meta-analysis was performed did the review authors use appropriate methods for statistical combination of results?	N.A.	

12. If meta-analysis was performed, did the review authors assess the potential impact of RoB in individual studies on the results of the meta-analysis or other evidence synthesis?	N.A.	
13. Did the review authors account for RoB in individual studies when interpreting/ discussing the results of the review?	Partial yes	It is mentioned in the discussion section, but not for each interpretation.
14. Did the review authors provide a satisfactory explanation for, and discussion of, any heterogeneity observed in the results of the review?	N.A.	
15. If they performed quantitative synthesis did the review authors carry out an adequate investigation of publication bias (small study bias) and discuss its likely impact on the results of the review?	N.A.	
16. Did the review authors report any potential sources of conflict of interest, including any funding they received for conducting the review?	No	Indicated to have no conflicts of interest.

Tabel 5. GRADE beoordeling

Quality assessment								No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	THC	Placebo	Relative (95%CI)	Absolute		
Chemosensory complaints (Taste and Smell Survey)												
1	RCT	Serious ¹	Not serious	Not serious	Serious ²	None	11	10	-	5.7 (THC) vs. 6.4 (placebo)	VERY LOW	
(Serious) adverse effects												
1	RCT	Serious ¹	Not serious	Not serious	Serious ²	None	11	10	-	6 events in both groups	VERY LOW	

¹ High loss to follow-up

² Imprecision due to small sample size

Onderzoeksvraag & onderzoekskenmerken Slechte adem

Onderzoeksvraag

Wat is het effect van begeleiding en behandeling op slechte adem bij patiënten in de palliatieve fase?

Patients/Patiënten	Patiënten in de palliatieve fase met slechte adem
Intervention/Interventie	Niet-medicamenteus: Mondverzorging, water drinken, reinigen van de tong, kauwgom Medicamenteus: Chloorhexidine, halita
Comparison/Vergelijking	Placebo, gebruikelijke zorg of andere interventie
Outcome(s)/Uitkomst(en)	Cruciaal: Slechte adem Belangrijk: Bijwerkingen

Author, publication year: Tashiro 2011						
Study characteristics	Patient characteristics	Intervention (I)	Comparison / control (C)	Follow-up	Outcome measures and effect size	Comments
Type of study: Non-RCT, cross-over Setting: Nursing home Country: Japan Source of funding: Matsumoto Dental University	<u>Inclusion criteria:</u> - Totally dependent nursing home residents - Difficulty with self-brushing - 10 or more remaining teeth <u>Exclusion criteria:</u> - Dentures <u>N total at baseline:</u> N=12 <u>Important prognostic factors:</u> <i>Age, mean (SD):</i> 80.2 (6.4) <i>Sex, male (%):</i> 3 (25)	I1: Tongue coat removal using a sponge brush for 5 days I2: Wiping the oral mucosa with a gargling solution containing chlorhexidine gluconate for 5 days	Oral cleaning by toothbrush alone (5 mins) for 5 days	<u>Length of follow-up:</u> 6 days <u>Loss-to-follow-up:</u> Not reported <u>Incomplete outcome data:</u> Not reported	Malodour measured with the Organoleptic examination. Smell decreased significantly after all three interventions. I1: zero patients with no smell before intervention, 5 patients with no smell after intervention I2: three patients with no smell before intervention, 6 patients with no smell after intervention C: zero patients with no smell before intervention, 8 patients with no smell after intervention Group differences not tested	Other outcomes are reported in the article but not relevant to this chapter.

Risk of bias tabel

Author, publication year	Random sequence generation (selection bias)	Allocation concealment (selection bias)	Blinding of patient and personnel (performance bias)	Blinding of outcome assessor (detection bias)	Follow-up and ITT or per protocol analysis (attrition bias)	Selective reporting	Other bias

Yonezawa 2003	Unclear <i>Method of randomization not reported</i>	Unclear <i>Method of randomization not reported</i>	High risk <i>Blinding not possible.</i>	Unclear <i>Blinding not reported.</i>	High risk <i>Outcome seems selective</i>	Unclear <i>Trial not registered</i>	High risk <i>Likely underpowered</i>
------------------	--	--	--	--	---	--	---

GRADE tabellen

Daily oral care using sponge brushes for two weeks vs oral care using sponge brushes every other day for two weeks vs continuous oral care using brushes for oral mucosa for two weeks vs usual care

Quality assessment								No of patients				Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Daily sponge brush	Sponge brush every other day	Mucosa brush	Usual care	Relative (95%CI)	Absolute		
Volatile sulphur compounds														
1	RCT	Very serious ¹	Not serious	Not serious	Serious ²	None	28	13	14	28	I1: 36.6 (SD 102.0) I2: 30.2 (SD 60.5) I3: 23.6 (SD 47.8) C: 103.11 (SD 157.4)	VERY LOW		

¹ High risk of bias due to method of randomization, loss-to-follow-up and lack of blinding

² Imprecision due to small sample size

Tongue coat removal using a sponge brush vs wiping the oral mucosa with a gargling solution containing chlorhexidine gluconate vs oral care with a toothbrush

Quality assessment								No of patients			Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Sponge brush	Wiping	Toothbrush	Relative (95%CI)	Absolute		
Smell (organoleptic examination)													
1	NRCT, cross-over	Very serious ¹	Not serious	Not serious	Serious ²	None	12	12	12	Smell decreased significantly in all groups (see table)	VERY LOW		

¹ High risk of bias due to lack of randomization, lack of blinding of outcome assessors, and lack of statistical analyses

² Imprecision due to small sample size

Boiled water mouth rinse during tooth brushing vs normal saline mouth rinse during tooth brushing vs chlorhexidine mouth rinse during brushing

Quality assessment	No of patients	Effect
--------------------	----------------	--------

No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Boiled water	Normal saline	Chlorhexidine	Relative (95%CI)	Absolute	Quality
Odour evaluation scale												
1	NRCT	Very serious ¹	Not serious	Not serious	Not serious ²	None	40	40	40		There was a significant difference for Time x Solutions ($F=3.97$, $p=0.002$).	LOW

¹ High risk of bias due to lack of randomization, lack of using a validated outcome measure and lack of details on sample selection

Essential oil solution used during cleaning of the mouth vs Tantum

Quality assessment							No of patients		Effect		Quality	
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Essential oil	Tantum	Relative (95%CI)	Absolute		
Visual Analogue Scale												
1	NRCT, cross-over	Very serious ¹	Not serious	Not serious	Serious ²	None	32	32		Odour level differed significantly between the two sessions after 1 hour ($p<0.001$).	VERY LOW	
Volatile sulphur compounds												
1	NRCT, cross-over	Very serious ¹	Not serious	Not serious	Serious ²	None	32	32		VSC differed significantly after 1 hour between both groups ($p<0.05$).		

¹ High risk of bias due to lack of randomization, lack of blinding of outcome assessors, lack of details on sample selection and study population

² Large confidence intervals

Oral gymnastics vs care as usual

Quality assessment							No of patients		Effect		Quality
No of studies	Design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Oral gymnastics	Care as	Relative	Absolute	

									usual I	(95%CI)	
Volatile sulphur compounds											
1	NRCT ¹	Serious	Not serious	Not serious	Serious ²	None	21	20		The difference s between both groups at 4 weeks was statisticall y significant (p<0.001)	LOW

¹ High risk of bias due to lack of randomization and loss-to-follow-up

² Confidence intervals not reported
